

TANVIRUZZAMAN TOHA

Android Platform Engineer

Narayanganj, Dhaka, Bangladesh | +880 1795-503539 | toha@softifybd.com

[linkedin.com/in/tanviruzzaman-toha-730b8b1b9](https://www.linkedin.com/in/tanviruzzaman-toha-730b8b1b9)

Android and Flutter developer working on production platforms for ISP and education clients. Lead contributor on a white-label Android platform that ships 1,000+ separately branded apps to Google Play from one Java codebase, with the build tooling, release automation, payment and hardware integrations that keep it shipping.

SKILLS

Languages: Java, Dart, Python, C

Android: Android SDK, MVVM, Dagger 2, Retrofit/OkHttp, LiveData, Navigation Component, Paging 3, WorkManager, Coroutines

Flutter: Dart, Riverpod, Dio, go_router, feature-first architecture, i18n/RTL

Platform: Gradle (multi-flavor, custom tasks), Fastlane, CI/CD, Google Play Console & Play API, Firebase (FCM, Analytics), Git

Integrations: 9 payment gateways (bKash, Nagad, ShurjoPay, SSLCommerz, aamarPay, EPS, Foster, Razorpay, PhonePe), SignalR, MikroTik Java API, ESC/POS & Sunmi thermal printing

EXPERIENCE

Android Platform Engineer — Softify BD Ltd.

2022 – Present

ISP Digital — White-label ISP Management Platform · Java, Android SDK, MVVM, Dagger 2, Retrofit, Firebase, Fastlane, Python
One Java codebase shipping 1,000+ separately branded, separately signed apps; three role-based apps in the same binary — subscriber, ISP admin, and MAC reseller. Top contributor: 363 of 730 commits.

- Built and maintained a white-label Android platform that ships 1,000+ individually branded, separately signed apps to Google Play from a single Java codebase, using Gradle product flavors with per-tenant signing, resources, and API endpoints.
- Engineered a Python + Fastlane release pipeline (keystore generation, flavor scaffolding, icon/resource generation, batch build & Play Store upload) that cut new-tenant onboarding and app updates from a manual multi-hour process to a single command.
- Designed a build-time Firebase config resolver that hooks into Gradle's processGoogleServices task to auto-select the correct google-services.json from 37 Firebase projects per applicationId, and fails the build on an unregistered app — eliminating a recurring class of production bug where a mismatched config silently broke push notifications and login for an entire tenant.
- Resolved a Google Play policy rejection by reimplementing the ShurjoPay checkout natively after its vendor SDK's SslErrorHandler.proceed() call was flagged under the Device and Network Abuse policy, restoring publishability without dropping the payment method.
- Integrated 9 payment gateways across Bangladesh and India — bKash, Nagad, ShurjoPay, SSLCommerz, aamarPay, EPS, Foster, Razorpay, PhonePe — behind a common listener/response abstraction.
- Implemented real-time MikroTik router bandwidth monitoring over SignalR hubs, plus router-level client status via the MikroTik Java API.
- Delivered field-operations features for ISP staff: Bluetooth ESC/POS and Sunmi thermal receipt printing, PDF receipt generation, offline-tolerant bill collection, accounting, support ticketing, and task management.
- Kept the app compliant through Android 14/15/16 target-SDK migrations (minSdk 23 → targetSdk 36), including edge-to-edge enforcement and 16 KB page-size alignment across a large third-party dependency set.

Edufy — School Management Platform · Flutter, Dart, Riverpod, Dio, go_router, Firebase, REST APIs, i18n/RTL, CI/CD

- Developed feature modules across Admin, Teacher and Student roles in a multi-tenant school ERP shipping as 300 white-label Android apps from one Flutter codebase — 135K LOC, 40+ modules.
- Built end-to-end modules including notices, leave application & approval, discipline records, document management, attendance and marksheets.
- Architected a feature-first codebase (Riverpod, Dio, go_router) with token interceptor, session invalidation, and encrypted storage.
- Delivered 5-language internationalization including RTL (Bangla, Arabic, Urdu, Turkish) with per-tenant theming.

- Automated the release pipeline: batched Gradle builds + direct Google Play API publishing, cutting a 300-app release to a single unattended run.

EDUCATION

B.Sc. in Software Engineering , Daffodil International University	2018 – Present
Higher Secondary Certificate (HSC) , Dhaka Residential Model College — GPA 5.00/5.00	2015 – 2017
Secondary School Certificate (SSC) , B.M. Union High School — GPA 5.00/5.00	2013 – 2015
